

Sales Management System Project

Goal: Build a small sales database and generate reports using SQL and Python.

Phase 1: Database Design

Create database: sales_db

Customers(customer_id, customer_name, city)

Products(product_id, product_name, price)

Orders(order_id, customer_id, product_id, quantity, order_date)

Use Primary Keys and Foreign Keys.

Phase 2: Insert Data

Insert at least 10 customers, 10 products, and 20 orders.

Phase 3: SQL Tasks

1. Show all orders with customer name, product name, quantity, and price.
2. Calculate total value of each order.
3. Show total sales for each product.
4. Show top 3 best-selling products.
5. Show number of orders per customer.
6. Show customers who never ordered.
7. Show average order value.
8. Show total sales per city.

Phase 4: Python Tasks

show_all_orders()

top_products()

city_sales()

Bonus

Create a menu with options: Show Orders, Top Products, City Sales, Exit.

Success Criteria

Database created

Relationships created

Sample data inserted

All SQL tasks completed

Python connected to database
